

Marine Security as a Service

Autonomously escort and protect commercial vessels. Our vessels escort commercial ships through high-risk passages, protecting them from piracy and drone attacks.

PROTECTION

Commercial ships transiting high-risk waters

ROLE

Escort through the dangerous passages, alongside the ship, from entry to exit

NAVIGATION

Autonomous. Unmanned — no crew aboard, no crew at risk

SENSING

Marine radar and multi-sensor watch — surface and aerial threats tracked and classified on approach

EFFECTORS

Defence drones and torpedoes, engaged at standoff distance

ENDURANCE

Full transit of the high-risk zone, entry to exit

DEPLOYMENT

Cluster-stationed at maritime choke points; dispatched to the transiting ship

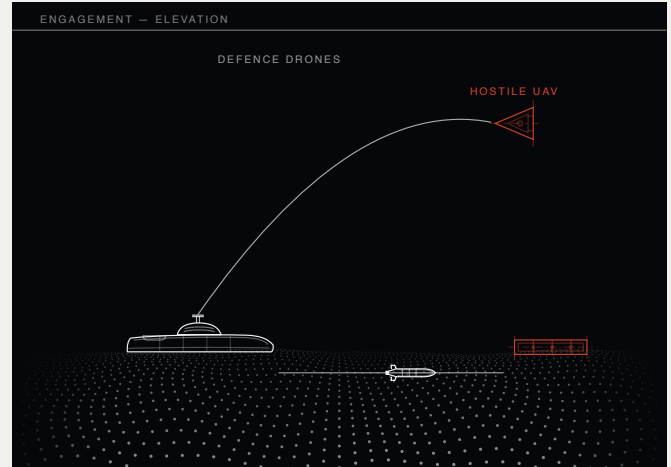

Autonomously escort and protect commercial vessels.

Contacts are classified on approach and engaged inside the intercept envelope — never alongside the hull.

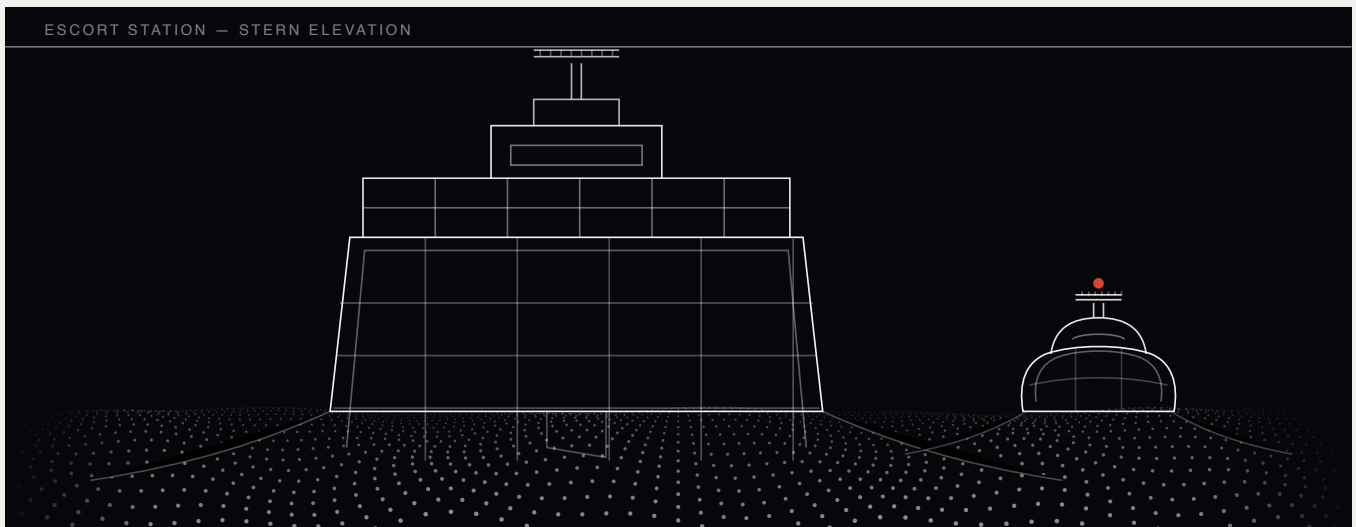

DETECTION AND INTERCEPT ENVELOPE

Radar and multi-sensor watch, held continuously around the escorted ship.

EFFECTORS

Defence drones engage aerial threats; torpedoes run out to hostile craft.

Built for high-risk passages.

Odd Fox holds vessel clusters at the maritime choke points where piracy and drone attacks concentrate. An escort is dispatched from the nearest cluster, runs the passage with the ship, and rejoins the cluster on the far side.

FLEET DISPOSITION

FLEET CLUSTERS — HIGH-RISK PASSAGES

Piracy.

Drone attacks.

Aerial threats.

Maritime threats.
